

## AI-Native Data Fabric

Instantly connect, discover, and use your data across the enterprise with Promethium's award-winning solution.

### The Promethium Difference

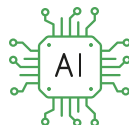

Promethium's AI-native instant data fabric empowers organizations to seamlessly connect to, discover, and access data across all their data sources—without moving or replicating data. With Promethium, data from over 200 sources can be queried in real time, accelerating your journey from raw data to actionable insights. Empower end users to leverage generative AI to interact with data through natural language queries, enabling true self-service analytics without the need for technical expertise.

Promethium's data fabric layers on top of your existing infrastructure, enabling seamless, federated queries across heterogeneous data sources.

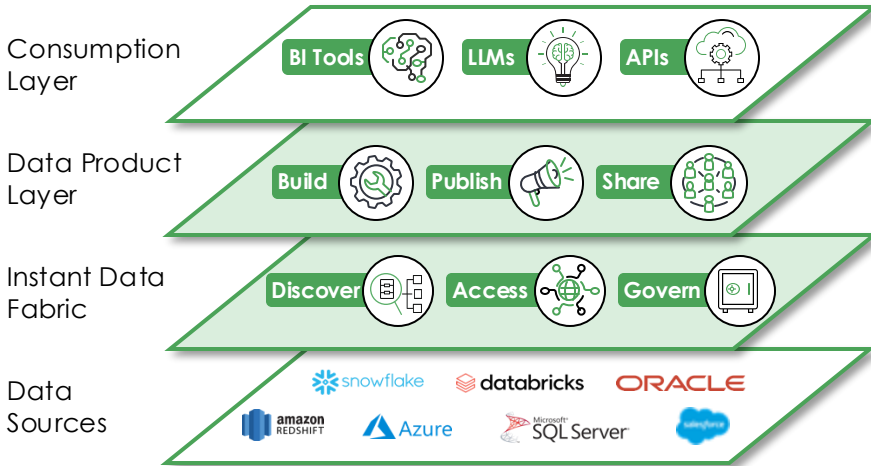

Unlock the value of your modern cloud platforms by creating governed data products 100x times faster.

Promethium leverages AI to automatically identify connections between data, providing recommendations and enable self service for non-technical users.

# The Fastest Way to Build Data Products

Promethium makes getting the right data to the right consumer radically fast and easy. Say goodbye to months-long development projects and hello to instant, AI-powered insights.

With Promethium's Instant Data Fabric, discover and access data from over 200 data sources in one central hub. Using federates queries access your data without duplication and in real time, while ensuring enterprise grade security and access controls.

Build reusable and consumption ready data products in minutes. Prototype, build and verify data within a single workflow, leveraging active metadata to enable AI and automation, while ensuring relevancy of your results.

Publish and share your verified results within your organization and enable self service for business users. Let your non-technical users interact with data using natural language and unlock generative AI within your organization by creating the necessary context for LLMs to work on top of your data.

## What Others Have to Say

"Promethium allows business users to construct data products much more quickly and cheaply as compared to products that do not use AI."

"In short, the tool is really useful, easy to use.... The ability to just ask a question and get the answer is like MAGIC."

"Anyone that has access to the data fabric can instantly query and consume. That's really our vision."
